

Task 1 — Company Onboarding & Marketplace Data Model

Author: Jeevan N | **Track:** Data Analyst | **Focus:** Marketplace Health & Liquidity

1. MARKETPLACE LIQUIDITY METRICS

Defined primary supply and demand liquidity indicators before operational data flows:

- **Match Fill Rate:** Proportion of match requests converted to transactions (Supply liquidity).
- **Search-to-View Rate:** Discoverability efficiency of search requests (Demand engagement).
- **Time-to-Match (TTM):** Average duration from request submission to listing match.

2. EVENT TRACKING PLAN MATRIX

EVENT NAME	TRIGGER	PROPERTIES	HEALTH TARGET
search_executed	User runs search query	query, category, user_id	Demand discovery
listing_viewed	User opens listing item	listing_id, seller_id	Listing CTR
match_requested	User initiates booking	listing_id, user_id	Conversion intent
transaction_completed	Payment settlement	value, transaction_id	GMV realization

3. SIMULATION & VERIFICATION RESULTS

- Simulated 500 event logs verifying event schema integrity.
- Data model supports real-time aggregation of GMV and match conversion rates.
